

Re: CEUs for Florida Master Naturalist Program Courses

To Whom It May Concern:

The intent of this letter is to describe the Florida Master Naturalist Program (FMNP) so that you may evaluate the FMNP as an appropriate educational program for obtaining continuing education credit for your organization.

Each FMNP Core course (Coastal Systems, Freshwater Systems, and Upland Systems) provides 40 contact hours of education. FMNP classes are taught by University of Florida certified Instructors and are offered by UF/IFAS and participating educational organizations. FMNP modules explain Florida's principle environments, the diversity of habitats within each, their flora and fauna, natural processes upon which they depend and the conservation challenges they face. Courses also emphasize teaching techniques and environmental ethics. Participants are required to develop and present environmental education projects as a synthesis and practical application of course material. Consequently, the FMNP addresses multiple forms of learning. In addition to information learned in class and during field trips, FMNP graduates receive extensive reference materials that provide excellent sources of information for continued learning and to support other educational efforts. Each FMNP module has a developed curriculum that includes:

- *Videos* (4 per course) are designed to provide a statewide perspective and virtual tours of major habitats and discuss conservation issues (Table 1).
- *Presentations* (12 per course) are designed to provide additional detail on the ecology, habitats, plants, and animals associated with the environments under study (Table 1).
- *Field trips* (3 per course) cover major categories of environments in the course and are designed to provide students with outdoor experiences and local knowledge.
- *Final projects and speaking requirements* provide students the opportunity to synthesize information from the course and gain experience developing and presenting an educational program.
- *Student Workbooks* include all slide presentations and notes, plus reference materials that go into additional detail on specific topics (Table 1).

If we can be of more assistance to you in this process, don't hesitate to contact our office at [fmnpcoordinator@gmail.com](mailto:fmnpcoordinator@gmail.com) or visit our website for additional resources: [www.MasterNaturalist.org](http://www.MasterNaturalist.org).

Sincerely,

A handwritten signature in black ink that reads "Martin B. Main".

Martin B. Main, PhD  
Professor and Program Leader  
Florida Master Naturalist Program
